

Patent issued for new Safety Technology!

Intelligent Safety Solutions was granted their patent for Emergency Evacuation and Wireless Mustering Solutions early last week. Don Bouressa, President and Founder of ISS said:

I am absolutely delighted! It has been a long frustrating wait as we had filed a provisional patent for this application back in 2002. I am doubly happy as we have numerous companies, along with government agencies, that are interested in the SafetyNet™ solution. I have also noticed that in the last few months, a number of other systems are being promoted in this arena. On one hand, this justifies our original concept, but it also puts them in possible violation of the patent.

ISS solution is called SafetyNet™ and the patent is a technology neutral utility patent that provides an emergency evacuation management protocol that will accurately and efficiently account for all individuals in the event of an emergency evacuation.

For additional information please visit intelligentsafetysolutions.com or one of our many technology partners.

ASIS 2008

If you are attending the trade show in Atlanta in September, please stop by and say "Hi!" to us at **booth 1611** just inside the door. We will be showing a working demonstration model of SafetyNet™ at our partner's HID booth as part of their HID Connect program utilizing their IClass™ technology.

Dan Grant, CMO of ISS, said, "I am extremely excited about our partnership with HID Global. They have been very supportive and an early adopter of SafetyNet. Their IClass technology is one of the leading choices for innovative application solutions."

Tuxen and Associates will be at booth 311 showing their NEDAP AVI technology. SafetyNet™ is now part of their "One Stop - Out of the Box Solution" concept. This functionality can be achieved by employing proven, existing Nedap AVI technology for the purpose of personnel mustering at the perimeter and is a "must have" for any safety manager that likes to sleep at night.

Gorm Tuxen, president of Tuxen & Associates and exclusive agent for Nedap AVI in the Americas recently said:

We are extremely excited about the prospect of working with Intelligent Safety Solutions and their new SafetyNet™ application. Mustering is an absolutely essential aspect of a well conceived safety and security plan. ISS has developed the utility to make existing technology function in a way that reduces to a minimum the potential of human error and directly supports the primary mission of safety: saving lives. It's a perfect match for Nedap AVI's technology and it really has the potential to become the industry standard immediately.

Please visit them at the show and find out more.

Customer Testimonial

"Intelligent Safety Solutions provided system hardware and software that integrated well with our current Security and Safety systems. Don's group provided excellent customer service before, during and after the project was completed. We have completed two projects with Intelligent Safety Solutions and we would highly recommend their systems and services."
