

Message from our President

Prior to 9/11 I was looking at this system as a way to start my own business. Since 9/11 It has become much more. I wanted to make sure that **SafetyNet™** would encompass the needs of the first responder... first. By streamlining the evacuation process and helping to make the process as accurate and as efficient as possible, we will be able to work together to save lives and reduce both the costs to the facility's and the insurance carriers.

It is my hope that Insurance carriers will give a small percentage discount to the Manufacturer, Hospital or Government Facility for installing this life saving and property preserving safety system, that small percentage will help to pay for the system in a short while. This in-turn will help to promote a community safety program that will save lives and property and will in the event of an emergency, which we know will happen sooner or later, will save the Insurance Carriers in huge claims due to heavy losses.

To the facilities installing **SafetyNet™**, I hope you experience the same "feel good" vibe that I had in designing this system. Knowing that you have made your workplace and community a safer environment. **SafetyNet™ will save lives and every life counts.**

As the CEO of this company, I am highly committed to the continual improvement process. Everything can be improved and will be with a close working relationship with First Responders, Government Officials and Community Leaders. Please give me your thoughts and suggestions.

Sincerely,

Don L. Bouressa
